fluid structure interactions fsi i e the interplay of some moveable or deformable structure with an internal or surrounding fluid are among the most widespread and most challenging coupled or multi physics problems although much has been accomplished in developing good computational fsi methods and despite convincing solutions to a number of classes of problems including those presented in this book there is a need for more comprehensive studies showing that the computational methods proposed are reliable robust and efficient beyond the classes of problems they have successfully been applied to this volume of Incse a sequel to vol 53 which contained among others the first numerical benchmark for fsi problems and has received considerable attention since then presents a collection of papers from the first international workshop on computational engineering special focus fsi held in herrsching in october 2009 and organized by three dfv funded consortia the papers address all relevant aspects of fsi simulation and discuss fsi from the mathematical

enables readers to start doing actual data analysis fast for a truly hands on learning experience this concise and very easy to use primer introduces readers to a host of computational tools useful for making sense out of data whether that data come from the social behavioral or natural sciences the book places great emphasis on both data analysis and drawing conclusions from empirical observations it also provides formulas where needed in many places while always remaining focused on concepts rather than mathematical abstraction spss data analysis for univariate bivariate and multivariate statistics offers a variety of popular statistical analyses and data management tasks using spss that readers can immediately apply as needed for their own research and emphasizes many helpful computational tools used in the discovery of empirical patterns the book begins with a review of essential statistical principles before introducing readers to spss the book then goes on to offer

chapters on exploratory data analysis basic statistics and visual displays data management in spss inferential tests on correlations counts and means power analysis and estimating sample size analysis of variance fixed and random effects repeated measures anova simple and multiple linear regression logistic regression multivariate analysis of variance manova and discriminant analysis principal components analysis exploratory factor analysis and non parametric tests this helpful resource allows readers to understand data analysis in practice rather than delving too deeply into abstract mathematical concepts make use of computational tools used by data analysis professionals focus on real world application to apply concepts from the book to actual research assuming only minimal prior knowledge of statistics spss data analysis for univariate bivariate and multivariate statistics is an excellent how to book for undergraduate and graduate students alike this book is also a welcome resource for researchers and professionals who require a quick go to source for performing essential statistical analyses and data management tasks

the burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities however in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience more recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition in order to promote the development of the neuroscientific investigation of online social cognition this frontiers research topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context specifically this research topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds for this research topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so while focusing on work in the neurosciences this research topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies by focusing on cutting edge research in social neuroscience and related fields this frontiers research topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social
